EDUCATION

University of British Columbia
Bachelor of Science in Computer Science

Sept 2017 – May 2023
Vancouver, BC

EXPERIENCE

EA 🔗

Software Engineer

Sept 2024 – Current
Vancouver, BC

- Architected and built backend services and frontend interfaces for **EA's advertising portal**, including database design, metadata handling, APIs, and campaign workflows with budgeting, ad pacing, and frequency controls.
- Implemented an asset versioning system for EA's targeted messaging platform, enabling **real-time hotswapping and instant deployment** of new asset versions across **all live game environments**.
- **Reduced message retrieval times by 98.6% (4.8s → 68ms)** by implementing a database mapping system between assets and dependent messages.

Tetra Tech 🔗

Software Engineer

May 2023 – Sept 2024
Vancouver, BC

- **Led backend development for the main product of FusionMap**, refactoring the monolithic Flask backend into a microservice-based architecture on Express, resulting in an **83% improvement in API speeds**.
- **Set up a CI/CD pipeline** using GitHub Actions and YAML files, leveraging self-hosted runners on virtual machines for deployments across multiple regions. Integrated end-to-end tests using Mocha/Chai.
- Optimized a map points rendering REST API with asynchronous, algorithmic, and PostGIS SQL improvements, implementing zoom-level-based clustering to **reduce response time by 99% (10 minutes to 5 seconds)**.
- Built a subscription-based payment system utilizing Stripe API for seamless transactions.

Alida 🔗

Software Developer Intern

Jan 2022 – Aug 2022
Vancouver, BC

- Worked on two new Dashboard types under Alida Analytics that **attracted 41 new enterprise customers**.
- Developed the One-Click Dashboard, **reducing dashboard creation time by 75%** and integrating AI models for customer feedback analysis.
- **Implemented mobile platform integration for Alida Dashboards**, incorporating an ETL pipeline to merge data collected on mobile platforms with the existing dashboard database.

Intel 🔗

Python Developer Intern

Sept 2019 – May 2020
Vancouver, BC

- Developed an internal Python tool utilized by the Intel Formal Verification team, serving as an automated verification pipeline for IC designs.
- Optimized formal verification processes using Python scripts, reducing manual tasks that would take hours down to seconds.
- Verified design specifications for individual blocks and circuit designs, Utilizing SVUnit for unit and integration testing.

PROJECTS

Moda 🔗

- Built a scalable React-based e-commerce application with live cart state management using Context API.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL, HTML/CSS

Frameworks and Tools: Express, Flask, React, Angular, Node.js, Docker, Microsoft Azure, AWS, Linux, Git
